

Patient Information Gathering & Electronic Documentation Workshop

Learning Goals & Overview

Clinical pharmacists need to gather patient information from a variety of sources such as the patient, the patient's family, other members of the patient's care team, and the electronic chart to perform patient centered assessments. Clinical pharmacists also need to document and share information about the care being provided complying with legal, regulatory and organizational requirements (CPRB 2018 3.1.8.d,e,i)

The purpose of this workshop is to orient residents to:

- a) Safely gathering patient information directly from the patient
- b) Gathering patient information from the electronic health record
- c) Communicating with the care team about the care being provided in the electronic health record

Goal 1:

To orient the resident to the process gathering of patient information using the electronic health record in addition to other sources of patient information.

Goal 2:

To orient the resident to clinical pharmacist documentation using Cerner in the electronic health record and communicating with the care team.

Goal 3:

To orient the resident to potential safety hazards when gathering information from patients such as infection control isolation, patient aggression and biohazard avoidance.
